

When you submit your application for a new supply, you need to enclose a location plan and a site plan.

Location plan

Please supply a location plan which identifies the proposed site for the new connection. A suggested scale for the location plan is 1:10000. The site location should be highlighted on the plan.

Suitable location plans can be obtained by using an A-Z of street maps or through websites such as:

www.multimap.com

www.streetmap.co.uk

www.maps.google.co.uk

www.ordnancesurvey.co.uk

The following example shows the type of plan we need:

Site layout plan

The site layout plan provides more detail on how the site is laid out, ideally through copies of the site layout plan which was submitted with your planning application. A suggested scale for the layout plan is 1:500.

Please include the following information on the site layout plan.

1. The plan should show all of the proposed buildings and access routes onto the site. These should show accurate measurements in relation to permanent features e.g existing buildings, boundaries, footpaths and roads.
2. The plan should show any existing buildings that will be demolished.
3. Please indicate where you would like the supply cable to enter the building and where you would like your meter to be located.
